

## Testimonial

My name is Daniel S., I am 52 years,

I lead an Interior renovation enterprise.

I am a former football player high-level amateur. Since I stopped sport I've greatly enlarged. It is obviously due to the fact that I stopped exercising but this is due too by the fact that I enjoy rich and copious meals.

For several months I had to take the decision to support myself and lose weight. I tried more or less strict regimes, but I gave up each time without finding the ideal weight. For sure I did not have the will.

When it has been proposed to me trying the effectiveness of the ACUFIRST bracelet on appetite, I tried the experience.

I had to put the bracelet in function whenever I felt snacking.

I used the bracelet for more than a month. I was surprised to see that this frequent desire to eat had disappeared and I managed to find a satisfactory food balance.

The resumption of the sport by hiking and playing tennis facilitated my weight loss too.

Since then, I still continue to use the wristband regularly.

I support the publication of my evidence showing that the bracelet gives good results.

Done in Paris on June 6th, 2010
