

Testimonial

I'm Emmanuel Pierre L., I am 49 years old, married and father of three children, I work for an airline company.

Former athlete and after having stopped exercising, I took weight and started smoking up more than a packet of cigarettes per day.

After many years of intoxication and wishing to resume sport, I consulted a sport specialist to advise me on what to do to succeed this sport resumption.

He gave me a progressive sport program, resuming food tips and insisted that I should quit smoking.

I already tried to stop smoking, but I had given up each time.

He offered me some help me with the ACUFIRST band and I tried the test without conviction.

After one month I worn the bracelet and whenever the envy of a cigarette took me, I activated the bracelet.

To my great surprise, I supported the smoke reduction easily from the first day and I have continued thus throughout the month, until full stop.

I've thus managed to stop smoking for several months and I hope that this is definitive.

I fully accept the publication of my evidence showing the effectiveness of the bracelet on smoking addiction.
